INDUSTRIAL TOOLS

FUJI TOOLS

Power and Precision in Perfect Harmony

**INDUSTRIAL TOOLS.
JAPANESE QUALITY
SINCE 1943**

A DEEP JAPANESE HERITAGE

From the beginning, Fuji has manufactured tools for some of the toughest and most demanding industrial environments in Japan and on the planet. This has resulted in a wide range of robust and long lasting material removal tools that is the preferred choice for metalworking in Japan and many places overseas. Our range of assembly tools and error proofing solutions was born from the needs of the Japanese manufacturing industry and delivers quality and safety together with speed of operation and ergonomic handling.

COMMITMENT TO QUALITY AND TECHNOLOGY

Every Fuji tool, from the simplest to the most sophisticated, is built to the same exacting standards. "Monozukuri", Japanese craftsmanship, is a core value in both manufacturing and design. Over 60 years of non-stop investment in R&D and kaizen manufacturing ensures that our products are built using proven, advanced technologies and provide superior ergonomics, safety and handling. Moreover, our commitment extends beyond our products to include the world we live in. Our production facilities are compliant with both the ISO 9001 and ISO 14001 standards.

**QUALITY
GUARANTEED**

**OUR COMPANY
IS CERTIFIED ISO 9001
QUALITY MANAGEMENT
AND ISO 14001
ENVIRONMENTAL
MANAGEMENT
STANDARDS.**

WIDE RANGE OF STANDARD AND SPECIAL PRODUCT

With a catalogue of over 1,400 references, we have one of the most extensive, most cost effective ranges of industrial tools available today. Our engineering team also has a long history of collaborating with customers to design solutions for special needs, both large and small.

COMMITTED TO LONG TERM CUSTOMER SATISFACTION

Fuji Tools are available through our network of authorized distributors that provide highly reactive after-sales service. They ensure that after years of service our products perform just as well as on day one. We support this network through both a dedicated international team in Japan and local market representatives in over 20 countries.

SELECTION GUIDE

How to understand Fuji model numbers

The model number of Fuji tools is formed by three elements of a combination of letters and numbers indicating the various properties and characteristics of tools concerned.

The first combination of letters indicates the group category that the model belongs to. "FRD" of the model FRD-6PH-3, for example, indicates that this model belongs to the group of "Fuji Rotary Drill".

The second part "6PH" shows the capacity in numbers like wheel size, bolt size, horse power etc. and also shows the types of throttle handle, exhaust direction and housing etc. in letters. In this case, "6" indicates drilling capacity and "PH" indicates pistol handle and rear exhaust.

The third part "3" shows the generation of models in numbers and types of handle, length of anvil and driver bit etc. in letters.

TORQUE TESTERS

FDM	Fuji Digital Tachometer
FDT	Fuji Digital Torque Tester
FFA	Fuji Fastening Adapter
FJT	Fuji Hydraulic Torque Tester

SELECTION GUIDE

About The Specifications on Our Catalogue

- 1) **Use the 10 digit** ordering numbers found in the tool selection guide when ordering.
- 2) **Bolt Size, Capacity**
Shows the capacity, which the tool can handle, as guidance for a tool selection. The bolt size of a fastening tool is a bolt size which the tool may fasten.
The capacities shown on this catalogue - tapping capacity, riveting capacity, etc. show the size which the tool may handle. Be aware, that the capacity may vary depending on such conditions as the tension, joint rate, material, etc. of the work.
- 3) **Recommended Torque Range, Max Torque**
Shows recommended torque range or max torque of the model. Torque figures in the specifications must be used as guidance only, as final output depends on type and size of fastener, joint rate and air pressure etc.
- 4) **Rotational Frequency**
Rotational frequency is indicated in revolutions per minute, min-1 at which the tool runs at no load at the working air pressure of 0.63MPa, 6.3bar, 90psi if not otherwise specified.
- 5) **Overall Length**
Shows the longest part of the tool without accessories attached. Refer to the last part of this catalogue «Dimensions» if the details of dimensions are necessary.
- 6) **Mass**
Shows the mass of the tool without accessories.
- 7) **Square Drive Size, Bit Shank Size**
Square drive size shows the square size of the spindle or anvil of pulse wrenches and impact wrenches. Bit shank size indicates the bit shank size of the driver anvil of screw drivers.
- 8) **Hex. Socket Size**
Shows standard hexagonal size of the socket of the ratchet wrenches.
- 9) **Air Inlet Thread Size**
Female threaded PT (Pipe Threads) and NPT (National Pipe Threads) are available.
- 10) **Air Hose Size**
The air hose size indicates recommended minimum hose inside diameter which is necessary to supply enough volume of air to the tool for designed performance.
- 11) **Air Consumption**
The air consumption of the tools is stated in m³/min, cubic meters per minute. It indicates the maximum air consumption at the working air pressure 0.63MPa, 6.3bar, 90psi if not otherwise stated.
Maximum air consumption is valid for the tool without a speed governor when the tool is running at no load.

according to ISO898-1

RECOMMENDED TORQUE RANGE

The torque requirement is one of the major factors to be considered when selecting fastening tools. The following graphic presentation shows the recommended torque range of our assembly tools. This is to be used for guidance only as final torque may vary depending in the type and size of the fastener, the joint rate, air pressure, etc. Optimum performance is achieved at the mid range of the tool's torque capability.

ELECTRONIC TORQUE CONTROL PULSE WRENCHES (P.19)

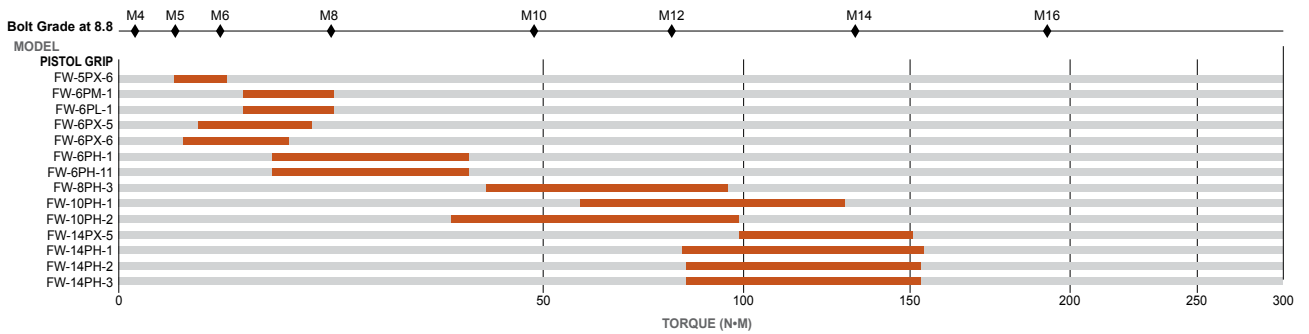

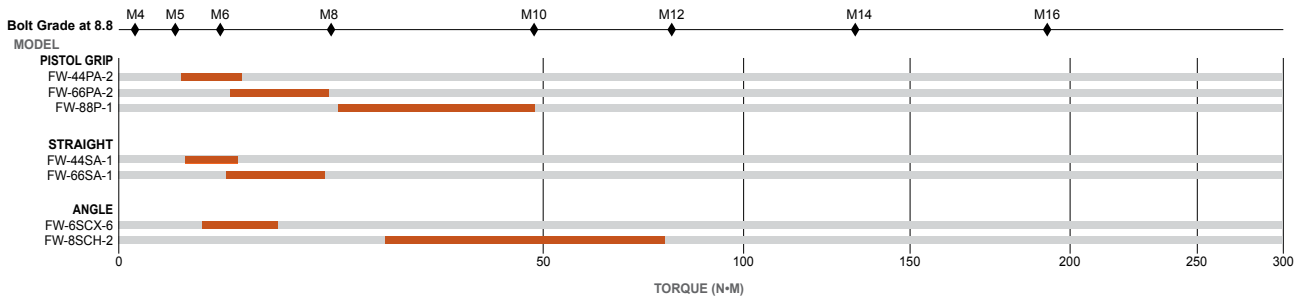

PULSE WRENCHES NON SHUT-OFF TYPE (P.22)

PULSE WRENCHES SHUT-OFF TYPE (P.26)

IMPACT WRENCHES - SMALL SIZE (P.30-32)

SELECTION GUIDE

IMPACT WRENCHES MEDIUM SIZE (P.33-34)

IMPACT WRENCHES LARGE SIZE (P.34)

SCREWDRIVERS (P.35-36)

Torque range should be used for guidance only as final torque may vary depending on the type and size of fastener, the joint rate, air pressure etc. Optimum performance is achieved at the mid range of the tool's torque capability

ASSEMBLY TOOLS FEATURES

EXHAUST WITH A MUFFLER

Our original built-in, swivel type, exhaust muffler is designed to reduce the noise level of the tool. The operator can also select a suitable direction of the exhaust air to minimise the risk of blowing any dust or debris in to the local work environment.

ALL WRENCHES EXCEPT FW-6PL, 6PLD, 5SXD-8, 80, FD-4, 5, 4P, 5P

TWO STAGE - SQUEEZING TYPE THROTTLE VALVE MECHANISM

The two stage / squeeze type throttle enables the operator to start the tool slowly and increase to full speed to aid location of the fastening at the start of the cycle.

REVERSE VALVE LEVER

All models feature a reversible motor. The operator can easily and quickly select the direction of rotation simply by turning or sliding the reverse actuator.

ALL WRENCHES EXCEPT FOW, FRW

To accommodate torque adjustment, the built in air regulator is used to regulate the air flow for selected models.

SQUARE DRIVE ANVIL

Two types of square drive anvils are available. As our standard for overseas, the models larger than 25.4 mm (1 inch) square drive are supplied with P anvil (Pin hole retainer type) and the models smaller than 19 mm (3/4 inch) square drive are supplied with BF anvil (Flat button retainer type). Small models can be supplied with P anvil on your request.

BIT SHANK TYPE ANVIL FOR SCREW DRIVERS

Two types of quick-change bit shank type anvils are available. Both are for 6.35 mm (1/4 inch) hex driver bit, but divided into two model groups according to the bit neck size.

ALL SCREW DRIVERS

CLUTCH MECHANISM-IMPACT WRENCHES AND DRIVERS

DOUBLE CLUTCH TYPE

The impact force is balanced with less torque reaction due to two impacts made per revolution. The double clutch type impact wrenches and drivers benefit from less vibration and longer service life than conventional single clutch models.

SINGLE CLUTCH TYPE

The impact force is harder and torque/weight ratio is better than the double clutch type. Single clutch type models are suitable for hard «pull-up» fastening operations for maintenance & service applications.

ASSEMBLY TOOLS FEATURES

■ PIN-LESS ROCKING DOG CLUTCH TYPE

The Fuji Pin-less rocking dog impact wrenches generate higher impact force than double clutch or 2-jaw clutch. Thanks to the one body design of pin and hammer, they have very high durability. The best tools for removing corroded fasteners.

■ 2-JAW ONE-DOG CLUTCH TYPE

The Fuji 2-Jaw clutch impact wrenches generate very high torque/weight. These types of tool are most suited for tightening prevailing torque bolts and for removing corroded fasteners.

HANDLE PROTECTOR

Ergonomically designed handle protectors provide reduced vibration, increased operator comfort and insulate the hand from the cold temperature generated by compressed air.

DUAL CHAMBER MOTOR

All Fuji pulse wrench models (FET, FLT, FPT, FL, FPW) and the series of impact wrenches (FW-44~88) are built with a 9 blade, dual chamber motor. This motor is designed to provide high torque at low speed, giving the best characteristics for fast reliable and accurate tightening.

2-BLADE PULSE UNIT

As the pulsing cycle is very short, there is almost no torque reaction in the handle grip (low motor torque only is felt by the operator). Unlike an impact wrench, the pulse tool has no «metal to metal» contact and consequently the pulse wrenches provide softer and stable «impulsing».

The benefits from this are less vibration, lower noise levels and longer service life when compared with conventional impact wrenches.

All pulse wrenches models (FET, FLT, FPT, FL, FPW) utilise the Fuji patented 2 blade pulse unit combined with the dual chamber motor. This combination provides 50% higher power to weight ratio than comparable fastening tools. For productivity, this design reaches torque faster, is excellent for soft joint or prevailing torque applications with reduced noise and vibration levels.

TESTERS

HYDRAULIC TORQUE TESTERS (NOT AVAILABLE FOR CE)

FJT-5-1~5C-1

FJT-10-1~10C-1

FJT-16-1~16C-1

The hydraulic torque testers are designed to satisfy the need for accurate torque checking and adjustment of shut-off type pulse wrenches and screwdrivers.

Features

- Bright LED digital display for easy reading in poor light conditions.
- Easy operation and high precision.
- Joint rate setting (soft joint to hard joint) is applicable

PORTABLE DIGITAL TACHOMETER (NOT AVAILABLE FOR CE)

The Fuji digital tachometer is ideal for the strict quality control of rotary tools. Accurate rotational speed tests are measured easily by utilising magnetism allowing the sensor to determine the rotational speed.

MB-B (PN 541 207 4543)
Magnet Base

Features

- Bright LED digital indication eliminates operator's errors.
- Non-contact measuring for safe and easy measurement.
- Wide measuring range.
- Quick response for quick measurement.

HOW TO MAGNETIZE

Magnetic Induction method is used for this tachometer. Be sure to magnetize the revolving part of a tool with the magnet provided so that a pair of N and S poles may be made.

When magnetizing a flat part, be sure to magnetize so that N and S poles may be made at the same time.

When magnetizing a hexagonal part, a square part, a round part, etc., be sure to magnetize so that N and S poles may be made proportionally.

HOW TO MEASURE

Angle Grinder (Wheel Flange A)

Die Grinder (Collet Chuck)

OIL FILLER - TESTERS

OIL FILLER

The Fuji oil filler is the ideal, and indispensable, equipment required for maintenance and repair of pulse wrenches. By connecting a conventional air supply to the handle valve, the oil filler makes re-filling the pulse unit assembly quick and easy.

COUNTDOWN ADAPTER

The Fuji FFA-2-2 Countdown Adapter counts the number of bolts tightened. It is used together with FLT & FPT Shut-off Pulse Wrenches (CD type) and FL & FPW Pulse Wrenches and lifts the error proofing capabilities of these tools. Optional devices like Buzzer or Light tower can be connected for quick notice of countdown error, or a signal can be output to the line control system. With its compact size, the FFA-2-2 is easily integrated into the assembly station.

M-C4P04M	Coupling with hose connection for FFA (1/2PT)	541 210 4396

TORQUE CONTROL SYSTEM

To accommodate the various requirements of torque control and assembly application, Fuji offers a complete range of fastening tools and reliable torque controllers designed to enhance quality and increase productivity. The following table shows various combinations of fastening tools and controllers. Choose the correct combination to meet your production requirements.

FET Series

CONTROLLING DYNAMIC TORQUE BY OIL PRESSURE

The Fuji FET system wrench is equipped with a torque transducer which enables torque control and monitoring on critical applications.

MINIMIZE TIGHTENING TORQUE SCATTER

Installed tightening torque tends to scatter for soft joint applications due to relaxation issues. To combat this, the FET system has functionality to add additional pulses after reaching torque target which ensures a more stable output.

UNIQUE FEATURES OF FET SERIES

- **Tightening graph display.**
(Possible to check pulses, torque and tightening time visually.)
- **Monitor tightening by torque value, time and pulses.**
(Improve detection of tightening error)

- **Bolts and blows counting function.**
Clarify the maintenance time by setting warning by bolts or pulses.
- **Channel.**
1 controller has 7 channels for flexible application.

- **Small footprint.**
- **Strong Cables.**
Kevlar reinforced cables ensure durability in tough operation

FET SERIES KIT

ACCESSORIES

The FET Kits collect all necessary accessories for ease of ordering. Kits are grouped based on tool size and hose type. Note that tool is purchased separately.

FOR FET 4, 5, 6, 7

Model	Type	Part Number
FET-K-ST3	Straight hose, 3m	541 210 4083
FET-K-ST6	Straight hose, 6m	541 210 4084
FET-K-S	Twin coil hose, 3m	541 210 4085

FOR FET 9, 11, 13

Model	Type	Part Number
FET-K-LT3	Straight hose, 3m	541 210 4086
FET-K-LT6	Straight hose, 6m	541 210 4087
FET-K-L	Twin coil hose, 3m	541 210 4088

CABLES

Part Number	Description	Length (m)
541 207 1324	FET-003-3K SENSOR CABLE	3
541 210 4076	FET-003-6K SENSOR CABLE	6
541 210 3283	FET-003-10K SENSOR CABLE	10
541 210 4077	FET-003-3X EXTENSION CABLE	1
541 207 1325	FET-003-5X EXTENSION CABLE	3
541 210 4044	FET-006-1.5K COMMANDER CABLE	1.5

PULSE WRENCHES NON SHUT-OFF TYPE

FL Series**F E A T U R E S****1 ACCUMULATOR MECHANISM**

The accumulator functions to compensate against the sudden rise of oil pressure when tightening a hard joint. Torque scatter and error is minimised.

As the oil temperature increases during consecutive tightening, the accumulator takes in the expanded volume of oil to maintain a consistent oil volume in the pulse unit. This ensures high tightening torque accuracy.

2 ENVIRONMENTALLY FRIENDLY DESIGN

To reduce effects on the environment and environmental energy during the life cycle of the tool, no paints is applied to th body of the tool. Consequently, the effect of paint peeling is eliminated. The fully cover protector is designed as standard.

3 ERGONOMIC DESIGN

Compared with conventional tools, weight is kept to a minimum. The grip handle size is optimised to provide enhanced levels of operator comfort. This special grip also absorbs vibration more effectively.

Furthermore, reduced noise and vibration levels are standard with the FL series due to the optimised dimensions.

PULSE WRENCHES NON SHUT-OFF TYPE

Recommended Torque Range, Max Torque

Shows recommended torque range or max torque of the model. Torque figures in the specifications must be used as guidance only, as final output depends on type and size of bolts and nuts, joint rate and air pressure etc.

PISTOL AND STRAIGHT MODELS (SQUARE DRIVE - BIT SHANK) Sq. 6.35 mm (1/4") ~ 9.5 mm (3/8") ~ 12.7 mm (1/2")

PULSE WRENCHES SHUT-OFF TYPE

FLT Series

FEATURES

1 SHUT-OFF VALVE MECHANISM

The Fuji shut-off valve and piston design provides the benefit of stable shut-off and torque levels. The design ensures smooth movement of the piston which means oil pressure is transmitted precisely to the shut-off valve. In effect - both the accuracy and consistency of the tightening torque is improved greatly. For the low air pressure operation 0.4-0.5 MPa (4-5 bar), low pressure models (-L) are provided with special design optimizing oil flow from relief valve. Thanks to this design, even low oil pressure can be transmitted exactly to the shut-off valve.

2 PLUNGER MECHANISM

Plunger Mechanism provides the benefit of improved Torque Accuracy.

For control of low torque, the oil pressure applied to the piston is maintained at a low level and improves torque control. To ensure high accuracy control of low torque, the plunger mechanism is utilised to deliver torque accurately. Oil leakage is prevented within the mechanism via a passage in the plunger which is designed to accommodate changes in oil pressure when the pulse is generated. Consequently, torque and tightening accuracy stability are maintained.

3 ACCUMULATOR MECHANISM

The Accumulator functions to compensate against the sudden rise of oil pressure when tightening a hard joint. Torque scatter and error is minimised.

As the oil temperature increases during consecutive tightening, the accumulator takes in the expanded volume of oil to maintain a consistent oil volume in the pulse unit. This ensures high tightening torque accuracy.

4 ENVIRONMENT FRIENDLY DESIGN

To reduce effects on the environment and environmental energy during the life cycle of the tool, no paint is applied to the body of the tool. Consequently, the effect of paint peeling is eliminated. The full cover protector is designed as standard.

5 ERGONOMIC DESIGN

Compared with conventional tools, weight is kept to a minimum. The grip handle size is optimised to provide enhanced levels of operator comfort. This special grip also absorbs vibration more effectively. Furthermore, reduced noise and vibration levels are standard with the FLT series due to the optimised dimensions.

IMPACT WRENCHES

Fuji Impact Wrenches FW-44~88 have 9-blade dual chamber motor and double clutch type impact mechanism. They are designed for giving high torque at low speed, which give the best characteristics for fast reliable and accurate tightening. These models are provided with two types of lubricant in clutch part, FW-44PA~66PA and FW-44SA~66SA series are with oil (Oil Bath type) which features long service life and FW-44P~88P and FW-44S~66S are with conventional grease. Both series are suitable for self tapping type soft joint.

IMPACT WRENCHES

Fuji Impact Wrenches are suitable for various fastening and unfastening operations. The combination of high torque and fast run down minimise operator fatigue.

SCREWDRIVERS

Fuji screwdrivers are suitable for a wide range of screw fastening and disassembly applications.

The compact and lightweight design provides operator comfort. All models are reversible via a reverse lever or push button. Impact clutch type models are all of double clutch design and their high torque and fast run-down minimise operator fatigue. Slip clutch type models are suitable for sheet metal screws and the torque setting can be adjusted easily.

RATCHET WRENCHES

Ratchet Wrenches are used for fastening operations in confined spaces where angle impact tools and nutrunners cannot reach. Reverse operation can be accomplished by simply turning the wrench over.

INSTRUCTION AND WARNING FOR SAFETY USE

GRINDERS AND SANDERS

INTENDED USE

The tool is designed to be used with abrasive product for grinding, cutting and sanding materials. Do not use the tool for any other purpose.

PROTECTIVE EQUIPMENT

Always wear necessary protective equipment such as an eye protector, an ear protector, a face shield, a safety apron, a helmet, gloves and other necessary protective clothing. Use protective barriers where necessary

MAXIMUM SPEEDS OF ABRASIVE PRODUCT AND TOOL

Always check the spindle speed of the tool when mounting the abrasive product. Ensure that the maximum free speed rating of the abrasive product is above that of the tool in use.

WHEEL SIZES OF ABRASIVE PRODUCT AND PERIPHERAL SPEED

The following is a reference of Grinding wheel size / Peripheral speed / Maximum free speed. When using abrasive product, on which the peripheral speed is shown instead of the maximum allowable free speed, refer to the reference.

Wheel diameter - Peripheral speed - Maximum free speed

Grinding Wheel diameter	Peripheral Speed (m/s)														
	10	15	20	25	28	30	33	35	40	45	48	50	60	70	80
mm	Maximum free speed (min ⁻¹)

CORRECT WHEEL GUARD AND FLANGES FOR GRINDER

Always use the wheel guard and wheel flanges supplied with the tool and ensure that they are mounted correctly with the appropriate tightness when mounting the abrasive product. Only trained & qualified personnel should mount the abrasive product. Do not use a wheel guard or the flanges if they are damaged or worn. Do not modify or repair a wheel guard or flanges.

CORRECT ABRASIVE PRODUCT TO CORRECT TOOL

Make sure the dimensions of the abrasive product are compatible with the tool and that the abrasive product fits the spindle of the tool.

MOUNTING AND DISMOUNTING ABRASIVE PRODUCT

When mounting and dismounting the abrasive product, make sure to disconnect tool. Make sure the dimensions of the abrasive product are compatible with the tool and that the abrasive product fits the spindle of the tool.

TOOL WITH SPEED GOVERNOR

For the grinder with a speed governor, check the maximum free speed regularly.

Make it a rule to check the maximum free speed, whenever before use.

ABRASIVE TOOLS FEATURES

REAR EXHAUST

The rear exhaust reduces the risk of scattering debris such as grindings, shavings, etc. due to the exhaust air direction.

In addition, when using the inlet and exhaust hoses supplied with the tools, this helps to reduce the sound level.

CENTRIFUGAL SPEED GOVERNOR

The speed governor maintains the working speed of the tool to a better degree than a conventional tool without a governor. Consequently, the abrasive life is improved due to the stability of the cutting speed. It is less susceptible to changes in air pressure and wear of the governor parts.

ANGLE, STRAIGHT, VERTICAL GRINDERS

ANTI-FREEZING SWIVEL SILENCER

The anti-freezing swivel silencer minimises the effect of freezing during operation of the tool. In addition, it also enables the operator to direct the exhaust air to provide maximum operator comfort.

ANGLE GRINDERS EXCEPT FA-2C, FA-30, 150K SERIES

GEAR COOLING DEVICE

The patented gear cooling device helps to minimise wearing of the bevel gear and pinion by metering some exhaust air through them and providing a cooling effect.

ANGLE GRINDERS

SELECTION OF THROTTLE TYPE

The Fuji grinders are available with 4 different handle configurations depending on the customer requirement. Locking lever helps to reduce the risk of inadvertent starting of the tool. The operator needs to push the locking lever (-F type) or the locking button (-M type) to start operation of the tool. When the lever is released, the tool automatically reverts to the locked condition.

Roll Throttle

Lever

Locking Lever (-F)

Locking Lever (-M)

ACCURATE COLLET ALIGNMENT

The collet is mounted in the spindle in order to provide minimal deflection.

Furthermore, the compact collet nut enables finishing operations in confined spaces.

STURDY STEEL HOUSING

Die Grinders feature a compact and durable steel housing for longer service life.

PENCIL GRINDERS / TURBO GRINDERS

TURBO GRINDERS

Super high speed operation provides a more precise finish. Ø3mm or Ø1/8" and Ø6mm or Ø1/4" collet sizes are available to suit the application.

MAX. DIAMETER OF ABRASIVES

Please use correct diameter of mounted points and carbide burrs for the speed.

PENCIL GRINDER

Pencil Grinders are excellent tools for deburring, contouring and light grinding when used with a rotary burr. The small compact diameter, and light weight, aid precise application.

FG-12U SERIES

FG-12U series are featured with an ergonomic spindle design supported by double bearings and connected to the motor spindle via a coupling. Together with this design 40,000rpm of speed provide the high accuracy and low vibration. Best tools for grinding with carbide burrs.

MAX. DIAMETER OF ABRASIVES

Please use correct diameter of mounted points and carbide burrs for the speed.

FG-26H SERIES

The FG-26H series features a high accuracy collet and spindle design to provide best in class run-out characteristics and low vibration, increasing life of abrasive. Suitable for both mounted point and carbide burr work. Extended models are also available for hard to reach applications

MAX. DIAMETER OF ABRASIVES

Please use correct diameter of mounted points and carbide burrs for the speed

Mounted Point		Burr Head	
mm	in	mm	in
25	1	13	1/2

COLLET BUSH (OPTION FOR 6MM COLLETS)

Please use it as an adapter when using 3 mm diameter mounted points

MAIN FEATURES

- High accuracy collet and spindle
- Low vibration
- Compact body and light weight

DIE GRINDERS

FG-50H SERIES

The FG-50H series features a high accuracy collet and spindle design to provide best in class run-out characteristics and low vibration, increasing life of abrasive. The higher power makes the tools especially suitable for carbide burr applications.

MAX. DIAMETER OF ABRASIVES

Please use correct diameter of mounted points and carbide burrs for the speed

Mounted Point		Burr Head	
mm	in	mm	in
32	1 1/4	22	7/8

MAIN FEATURES

- High accuracy collet and spindle
- Low noise and vibration
- Compact but sturdy body and light weight
- Suitable for carbide burr applications

COLLET BUSH (OPTION FOR 6MM COLLETS)

Please use it as an adapter when using 3 mm diameter mounted points

LOW SPEED GRINDERS

These powerful Grinders are designed with a gear reduction mechanism and speed control governor to maintain the power and rotational speed. Their light weight and compact design make them excellent for polishing, grinding, paint removal and can be used with non-woven cloth, brushes, flap wheels and buffs.

4" ANGLE GRINDERS

There are three main ranges of 4" grinders, all designed for robustness and performance in demanding environments. The FA-30 features a small form factor and low weight. A versatile grinder that is very efficient for hard to access applications or non-horizontal work.

The FA-4C is air efficient and a great choice where there are limitations to air supply. Suitable for a variety of applications. The FA-40 features high power and is especially suitable for tough applications such as aluminum grinding but offers high removal rates over all areas.

Each series is available in a variety of handle configurations. The FA-30 also has rear exhaust versions.

MAX. DIAMETER AND HOLE SIZE OF GRINDING WHEELS - TYPE 27

Please use correct diameter of grinding wheels for the speed. Also select the correct hole size.

BELT SANDERS

Fuji Belt Sanders are ideal for precise and efficient sanding of confined areas such as spherical surfaces and tubes which are difficult to access with conventional grinders. They are also the ideal tool for de-burring applications. 360 degree head rotation provides versatile solution for almost any application.

ORBITAL SANDERS

Fuji Orbital Sanders are compact, lightweight & manoeuvrable, yet powerful enough for finishing lacquered and metal surfaces prior to re-painting. The effective dust extraction with rear exhaust helps keep the working environment clean.

Features

- Powerful sanding, high stability and low vibration.
- Excellent dust extraction ability to help keep the work area clean
- Available to suit variations of sandpapers; self-adhesive type, Velcro (Nylon Strip Fastener) Type and standard Clip-on Type.

DRILL SIZE, CUTTING SPEED AND MATERIAL

When selecting a suitable model of drill for your application, it should be chosen on the basis of drill bit size and suitable cutting speed for the material to be drilled. The table below shows the recommended drill bit sizes for different speeds when drilling some common materials. The figures in the table are based on drill speeds at normal pressure and the minimum torque in conjunction with drill breakthrough. The table only shows which drill bit sizes give the cutting speeds within the ranges stated. Note that it is quite possible to drill with smaller diameter drill bits, i.e. at lower cutting speeds.

In order to obtain a sufficient cutting force when applying feed pressure by hand, pre-drilling is recommended for drill bit sizes above 8 mm when drilling in mild steel, soft cast iron, malleable iron as well as for holes larger than 6 mm in forged steel and stainless steel.

Fuji Drills are light weight with a sturdy construction. Their practical design represents Fuji's latest developments in drills technology. Fuji offers a complete line of drills with a drilling capacity range from 2 mm to 100 mm.

Suggested Cutting Speed (min⁻¹) for Drilling

Material	Stainless Steel	Forged Steel	Mild Steel	Soft Cast Iron	Malleable Iron	Brass or Bronze	Aluminum	Magnesium	Plastic	Wood	Titanium
Drill bit size (Cutting speed (m/min))	9-12	12-15	24-33	30-45	24-27	60-90	60-90	75-120	30-45	90-120	15-18
3 mm	1100	1400	3000	4000	2700	8000	8000	10400	4000	11000	1750

DRILLS FEATURES

REVERSIBLE

Fuji offer some reversible drills. The reverse action is selected by simply turning the reverse lever.

PLASTIC COVER

The plastic cover softens the effect of vibration during the drilling application and creates a "warm to touch" feeling to improve operator comfort.

TWO-STAGE THROTTLE ACTUATION

This mechanism allows slow start smooth operation to full speed allowing the drill bit to be centralised prior to drilling at full speed.

DEAD HANDLE

The dead handle helps to soften the breakthrough reaction force experienced when drilling "tough holes".

SWIVEL TYPE EXHAUST COVER

The exhaust cover can be rotated to enable the operator to choose a convenient direction of the exhaust air.

SELF-RETURN ROLL HANDLE

When the operator releases the handle, it automatically returns to the "OFF" position and the air supply is switched off. When ordering, add "S" to the end of the model name.

REAR EXHAUST WITH BUILT-IN MUFFLER

The noise level is minimised via the muffler built into the exhaust cover.

LOCKING HANDLE

The locking handle is designed to reduce the risk of inadvertent starting of the drill. The handle reverts automatically to the locked position when released.

JACOBS TAPERED MODELS WITH YUKIWA CHUCK

Fuji offer special models with Jacobs tapered spindles and chucks for very precise drilling application.

Especially FRD-6PH series provides run-out (0.02mm for FRD-6PH-2 & 3, 0.06mm for FRD-6PH-5 & 7)

For more versatile applications the series provides 3/8"-24 spindles models (FRD-6PH TH).

BABY ANGLE DRILLS

BABY ANGLE DRILLS

Fuji Baby Angle Drills are equipped with a compact head (low height and side-to-center head dimensions) to allow these tools to be used in confined areas. Ball and needle bearings used throughout angle heads provide long service life and less spindle run-out.

SO-55	541 205 6243	56 - 70	

TAPPERS FEATURES

REVERSING

- A.** Twin lever type-one lever for forward rotation (with throttle actuation) and one lever for reverse rotation (with throttle actuation).
- B.** See-saw type lever for throttle actuation and reversing.
- C.** Push/Pull type-forward rotation when the tool is pushed into the work-piece, reverse rotation when the tool is pulled away from the work-piece.

**TWO-STAGE THROTTLING**

This mechanism allows a "slow start" to ensure tap is correctly aligned prior to actuating "full speed".

**AIR REGULATOR**

A 4 click stop regulator is built in and the operator can regulate air supply for torque adjustment.

**DEAD HANDLE**

The dead handle is used to reduce the effect of "snatching" when tapping a through hole. It is also used when tapping "high torque" threads.

**REAR EXHAUST WITH AIR EXHAUST HOSE**

Connecting an air exhaust hose, provides improved operator comfort by directing the exhaust air away and reducing the noise level.

**REAR EXHAUST WITH BUILT-IN MUFFLER**

The noise level is minimised via the muffler built into the exhaust cover.

**UNIVERSAL TAPPING CHUCK**

The universal tapping chuck provides optimal grip of the tap during the tapping operation.

**DRILL CHUCKS**

A drill chuck can also be used for tapping where appropriate.

TAPPERS

Easy to use throttle and reversing trigger combined with a universal tapping chuck provide a smooth tapping operation. Fuji Tappers are available in tapping capacities from 6mm to 13mm.

PERCUSSIVE TOOLS FEATURES

VALVE MECHANISM

Equipped with following valve mechanism, Fuji Percussion Tools have trouble-free long life.

A. PLATE VALVE

Plate valve consists of four parts of valve sheet, valve cover, valve case and valve. This simple mechanism and plate valve surface provide longer durability.

FR Series

B. SLEEVE VALVE

Hollow valve enables a light and compact body and longer stroke for its size.

C. PISTON VALVE

High blow frequency (60Hz to 90Hz) can be maintained as this piston functions as a valve providing high working efficiency.

LOW AIR CONSUMPTION

Low air consumption 0.14-0.18 m³/min (due to the valve mechanism) enables Fuji Percussion Tools to be used with a smaller compressor.

QUICK CHANGE ATTACHMENTS FOR PERCUSSIVE TOOLS

Attachment, such as chisels and needles, can be quickly and easily changed.

MULTI-NEEDLES

Fuji Needle Scalers utilise multiple needles that do not contaminate the workpiece.

PLASTIC HANDLE COVER

The plastic handle cover reduces the effect of vibration and provides an insulated grip for the operator.

LOCKING HANDLE

The locking handle are designed to reduce the risk of accidental starting of the tools. The handle is automatically locked when the operator releases the handle.

A. Locking Roll Handle : FS-2A

B. Locking Locking Lever Handle : FS, FR, FCH, FNS Series

LOW BLOW FREQUENCY

The built-in Sleeve Valve allows the operator to adjust the blow frequency by adjusting the throttle valve.

CHISEL RETAINER

A. Holder Spring (Bee-Hive Retainer)

B. Holder Spring (B) (Quick Change Retainer)

CHISEL HOLDER

Fuji Chipping and Calking Hammers are supplied with a chisel holder as standard. This reduces the risk of the chisel releasing during operation.

PERCUSSIVE TOOLS

Fuji offers 3 variants of flux chippers with different removal rates.

They are ideal for various removal operations; light chipping, carving stone, scaling, removing paint, rust, weld flux and light fins from castings. FCH-25B offers a "blow" function which is ideal for blowing particles away from the work piece.

PERCUSSIVE TOOLS

LIGHT HAMMERS

Fuji light hammers provide a controllable impact for rivetting to reduce the effect of work hardening of the rivet or damage to the surrounding metal. These tools are easily adapted to perform other operations, such as cutting, ripping, shearing, punching and gouging with suitable chisels fitted.

PERCUSSIVE TOOLS

NEEDLE SCALERS

Fuji needle scalers are useful for removing weld flux, sand from castings, scales from forgings, rust, paint, scales from ship hulls and finishing rough surfaces of rock or concrete. Fuji needle scalers feature a unique valve less design and work well on uneven or irregular surfaces.

SAND RAMMERS

Fuji sand rammers are powerful but light with a stroke range from 50mm to 127mm. Fuji sand rammers are excellent for ramming sand for casting in any ferrous or non-ferrous foundry. Non-rotary type rammers are available for use with irregular shaped butts.

AIR MOTORS

REVERSIBLE / NON-REVERSIBLE TYPE _____ 92

AIR MOTORS

Fuji Air Motors are compact and light weight, yet sturdy and offer high power-to-weight ratios. Fuji offers a wide range of air motors from small 0.1 kW hand-held motor to large 20 kW stationary motor which are found at versatile industries like ships, chemical plants, mines and power plants etc. As air motors are less likely to generate sparks (unlike brushes in electric motors), they are better suited for use in hazardous environments. Please refer to your Fuji sales representative to get detailed air motor specifications and air diagram information.

AIR FILES / AIR SAWS

Fuji FRF series compact Air File & Saws feature reduced vibration and are designed for deburring, filing and cutting of metal, wood, plastic, and fibreglass. The FRS-45 Air Saw is equipped with a damper to minimize vibration and, a stroke regulator and blade cooling device. The cutting direction is adjustable to provide optimal operator comfort.

CHAMFERING MACHINES

CHAMFERING MACHINES

Fuji Chamfering Machines are powerful and durable. They are ideal for chamfering edges of steel skeleton materials used in various industries such as ship building, bridge and steel frame construction. Pneumatically driven with easily replaceable carbide tips provide uniform and precise chamfering.

ALUMINUM MILLING MACHINES

Aluminum Milling Machines are ideal portable tools to remove weld beads flush to the work surface and "V" grooving for aluminum welds milling type rotary cutters. The high power motor supplied with speed control governor provides smooth milling. The tools feature easy depth adjustments, chip blowing, milling cutter cooling, slow start throttle, and center guide with roller for easy operation.

SUMP PUMPS / PISTON PUMPS

SUMP PUMPS

Fuji Sump Pumps are indispensable for discharging water, oil, sewage and sludge from sumps, trenches, manholes, bilges and tanks. They may be used in non-spark environments and their housing are rust-proof.

TIP DRESSERS

Fuji Tip Dresser FTD-18 series are designed to be compact, light weight and ideal for dressing tips in narrow space between opposing tips on electric spot welders. FTD-18A clamp system provides excellent tip center alignment and accurate tip repairing. Various types of welding tips can be dressed by replacing cutter and cutter case.

AIR COMPRESSOR / AIR PRESSURE

AIR COMPRESSOR

The capacity of an air compressor should be higher than the number of air tools in operation. In other words, when the respective factors are represented by the following signs, the expression should be $Q > Nq + a$.

- Q** : Capacity of Air Compressor
- q** : Air Consumption of Each Tool
- a** : Air Leakage in Piping
- N** : Number of Air Tools

The power of an air compressor necessary to compress air of 1 m³/min at the air pressure of 0.63 MPa is theoretically calculated at 4.44 kW (6 PS). But, the required power of an air compressor comes to 7.4 kW (10 PS) to 11.1 kW (15 PS) depending on the types of compressors (reciprocating or screw compressors) when the actual efficiency of an air compressor is taken into account. For instance, what capacity of an air compressor is required if 1 piece of FA-7C-4 angle grinder is used? Air of 1.4 m³/min is necessary to use 1 piece of FA-7C-4 angle grinder and the required power of an air compressor is calculated at 10.36 kW (14 PS) to 15.54 kW (21 PS). If 20 pieces of FA-7C-4 angle grinders are used at the same time, air of 19.6 m³/min is necessary and the required power of an air compressor is calculated at 145.0 kW to 217.6 kW (196 PS to 294 PS). Even if the number of tools changes, the required power of an air compressor can be obtained by simple calculation. Yet, when a number of air tools are used at the same time,

it does not seem that all the air tools are concurrently used at the maximum air consumption, so the following expression is given under our past experience.

- Air Tools : **A, B, C...**
- Number of Air Tools : **Na, Nb, Nc...**
- Air Consumption of Each Tool : **Ca, Cb, Cc...**
- Coefficient according to Number of Air Tools : **F**
- Total Air Consumption : **Q**

$$Q = F (Na \times Ca + Nb \times Cb + Nc \times Cc + \dots)$$

The coefficient is given as per the under-mentioned table according to the number of air tools. The coefficient is in inverse proportion to the number of air tools.

Number of Air tools	1-5	6-10	11-20	21-30	31-50	51-100
F	1.0	0.8	0.7	0.6	0.5	0.4

Those coefficients are obtained because air tools are not always in successive operation. It is usual that operations of air tools are intermitted for changing jobs, lubrication, changing grinding wheel, drill bit, chisel, etc. There is a case that even small capacity of an air compressor can be available due to an interval of jobs when such air tools as impact wrenches, screw drivers, etc. are in operation. The running time of those air tools for one job is 2 to 5 seconds and they are not used in succession for one job.

AIR PRESSURE

Air pressure should be maintained at less than the recommended air pressure at the inlet of the air tool. Our air tools are usually designed to be used at the air pressure of 0.63 MPa and the fluctuation of air pressure affects the performance of the air tool. For instance, if the power of an air tool is 0.74 kW (1 PS) at the air pressure of 0.63 MPa, the power of the air tool generally comes to the following figures at each air pressure.

Air Pressure (MPa)	0.70	0.63	0.50	0.40	0.30
Power (kW)	0.93	0.74	0.56	0.40	0.26

It should be taken into account that air pressure drops at the inlet of the air tool due to the resistance and leakage caused when air passes in the pipe even if the air pressure is 0.63 MPa at the outlet of the air compressor. Needless to say, the loss of power may be caused unless the appointed air hose is used.

On the contrary, when air pressure fluctuates higher than the recommended air pressure at the inlet of the air tool, parts may consume comparatively faster, and what is worse, accidental operations may be induced, so air pressure should be maintained at less than the recommended air pressure at the inlet of the air tool in any case.
